

OptraGate® Moisture control made easy

OptraGate® is a latex-free lip and cheek retractor. The aid's unique flexibility and elasticity make it comfortable to wear and assist patients to keep their mouth open.

Effective isolation

due to easier access

Focused and efficient treatment procedures

Used in over

milion treatments to date*

Esthetics are impossible without moisture control

Adequate isolation is essential for the successful placement of direct restorations to avoid any contamination of the cavity with saliva, secretion and blood.

Often, relative isolation is already sufficient to achieve good results and patient acceptance is high for this form of isolation. Irrespective of whether you are placing a composite filling or cementing a ceramic restoration, OptraGate is an effective and efficient aid that forms a sound basis for the long-term clinical success of esthetic restorations.

Restoration of a deciduous tooth using relative isolation

Insertion of a partial crown on the LL6 using relative isolation

Effective isolation thanks to easier access

The lip and cheek retractor enables easy access to an enlarged treatment field. It is therefore easier for clinicians to recognize salivation, directly remove it and thus minimize the risk of contamination.

Focused and efficient treatment procedures

Since OptraGate retracts the lips and cheeks evenly and gently, the need for using a dental mirror to assist in retracting soft tissue is eliminated. In addition, OptraGate also assists the patients in keeping their mouth wide

open for a prolonged time, benefiting efficient treatment procedures. The different colours available are designed to please children and increase their compliance.

Versatile range of indications

OptraGate provides a convincing solution in many different clinical situations, far more than just moisture control. Tiresome retraction of soft tissue is a thing of the past with OptraGate.

Restorative treatment in

Pediatric dentistry

"As a clinician, I benefit from easy access to an enlarged treatment field and a streamlined procedure to achieve relative isolation. In addition, I am now able to perform many treatments without the help of a dental assistant. OptraGate allows me to focus completely on my patient and the clinical situation at hand."

Dr med. dent. Knut Hufschmidt

OptraGate is placed within a few seconds. Placement is a piece of cake. See for yourself!

OptraSculpt®

Time-saving contouring due to anti-stick properties

OptraSculpt® and OptraSculpt Pad are contouring instruments suitable for the non-stick shaping and contouring of surfaces. They are especially designed to shape unpolymerized sculptable composites in direct restorative treatments and to contour and smoothen paste-like laboratory composites.

Outstanding esthetics

The contouring and shaping of state-of-the-art high-quality dental composites is a challenging task. Thanks to their non-stick coating, the OptraSculpt attachments provide remedy since no instrument marks are left on the material. Special attachment shapes are available to minimize the risk of air entrapments in the composite during application. Ultimately, a homogeneous surface design is a prerequisite to achieve esthetic results.

Contouring with OptraSculpt Pad

Final outcome

Reference scales on the instrument handle support clinicians in achieving true-to nature esthetic and anatomically shaped restorations. The reference scales on the instrument handle provide easy comparison with average tooth widths and axis alignments in e.g. upper anterior teeth.

Effective contouring for long-term success

Apart from other factors, contouring significantly influences the long-term success of the treatment, since the correct anatomical shape of the restoration is crucial to the overall health of the chewing system. The attachment shapes and working angle of the OptraSculpt Pad and OptraSculpt instruments have been especially adapted to suit anterior and posterior surfaces. Correctly designed proximal marginal ridges facilitate the cleaning of interdental spaces. Moreover, smooth restoration surfaces minimize the accumulation of plaque, and carefully created margins reduce the occurrence of secondary caries.

ChiselContouring of proximal marginal ridges

Easy adaptation due to non-stick effect

The innovative two-component attachments allow you to achieve natural-looking restorations with little effort. The attachments' non-stick effect prevents the instruments from sticking on the composite material. Adaptation of composite material is very easy since no instrument marks are left on the material.

Reduced effort in finishing and polishing

A mark-free, homogeneous contouring result allows you to streamline the finishing and polishing procedure and reduces the amount of time required to complete the restoration.

OptraGloss®

Efficient polishing of composite resin restorations

OptraGloss® are universal polishers coated with micro-fine diamond particles. The high-gloss polishers are ideally suited for the polishing of all popular composite resin fillings.

OptraGloss® polishers are designed to meet the polishing needs of ceramic materials.

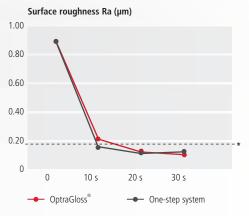

- Particularly smooth and shiny restoration surfaces
- No additional polishing paste needed
- High gloss of various ceramic surfaces in just one working step (e.g. IPS Empress® CAD and IPS e.max® CAD)

High lustre in just one step

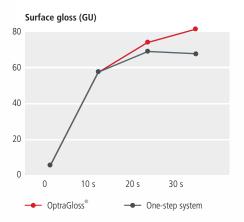

OptraGloss imparts a natural-looking, beautiful high lustre to composite resin fillings. Due to a high diamond content of up to 70%wt, excellent polishing results are ensured.

Smooth surfaces that minimize plaque retention

* Clinically relevant threshold value (Bollen, C.M. et al., 1997)

Only a few seconds are needed to achieve an excellent surface gloss in one polishing step
